

VNCfluid

Your 360° Dashboard with full access
to everything in your VNClagoon Suite

VNC – Virtual Network Consult AG

VNC is the leading vendor of an integrated stack of collaboration and communication products for organisations who prefer to go with software that is based on open standards: VNClagoon.

About us

VNC – Virtual Network Consult AG, based in Switzerland, Germany and India – is a leading developer of open source based enterprise applications and positions itself as an open and secure alternative to the established software giants.

With the VNClagoon software stack, VNC, with its global open source developer community, have created an integrated product suite for Enterprise, SME, Governments and other Organisations, characterised by high security, state-of-the-art technology and low TCO.

The VNClagoon software stack consists of a variety of integrated products for seamless communication and collaboration, such as messaging, video conferencing, email, groupware, task & project management, file sharing, channels, and more. VNClagoon is a leading alternative to closed source and / or SaaS-only applications like Microsoft Teams, Zoom, WhatsApp and others.

The impressive list of VNC customers, who are using one or several of the VNClagoon components and products, demonstrates the solidity of the VNC concept: the future of modern software will no longer rely on closed source!

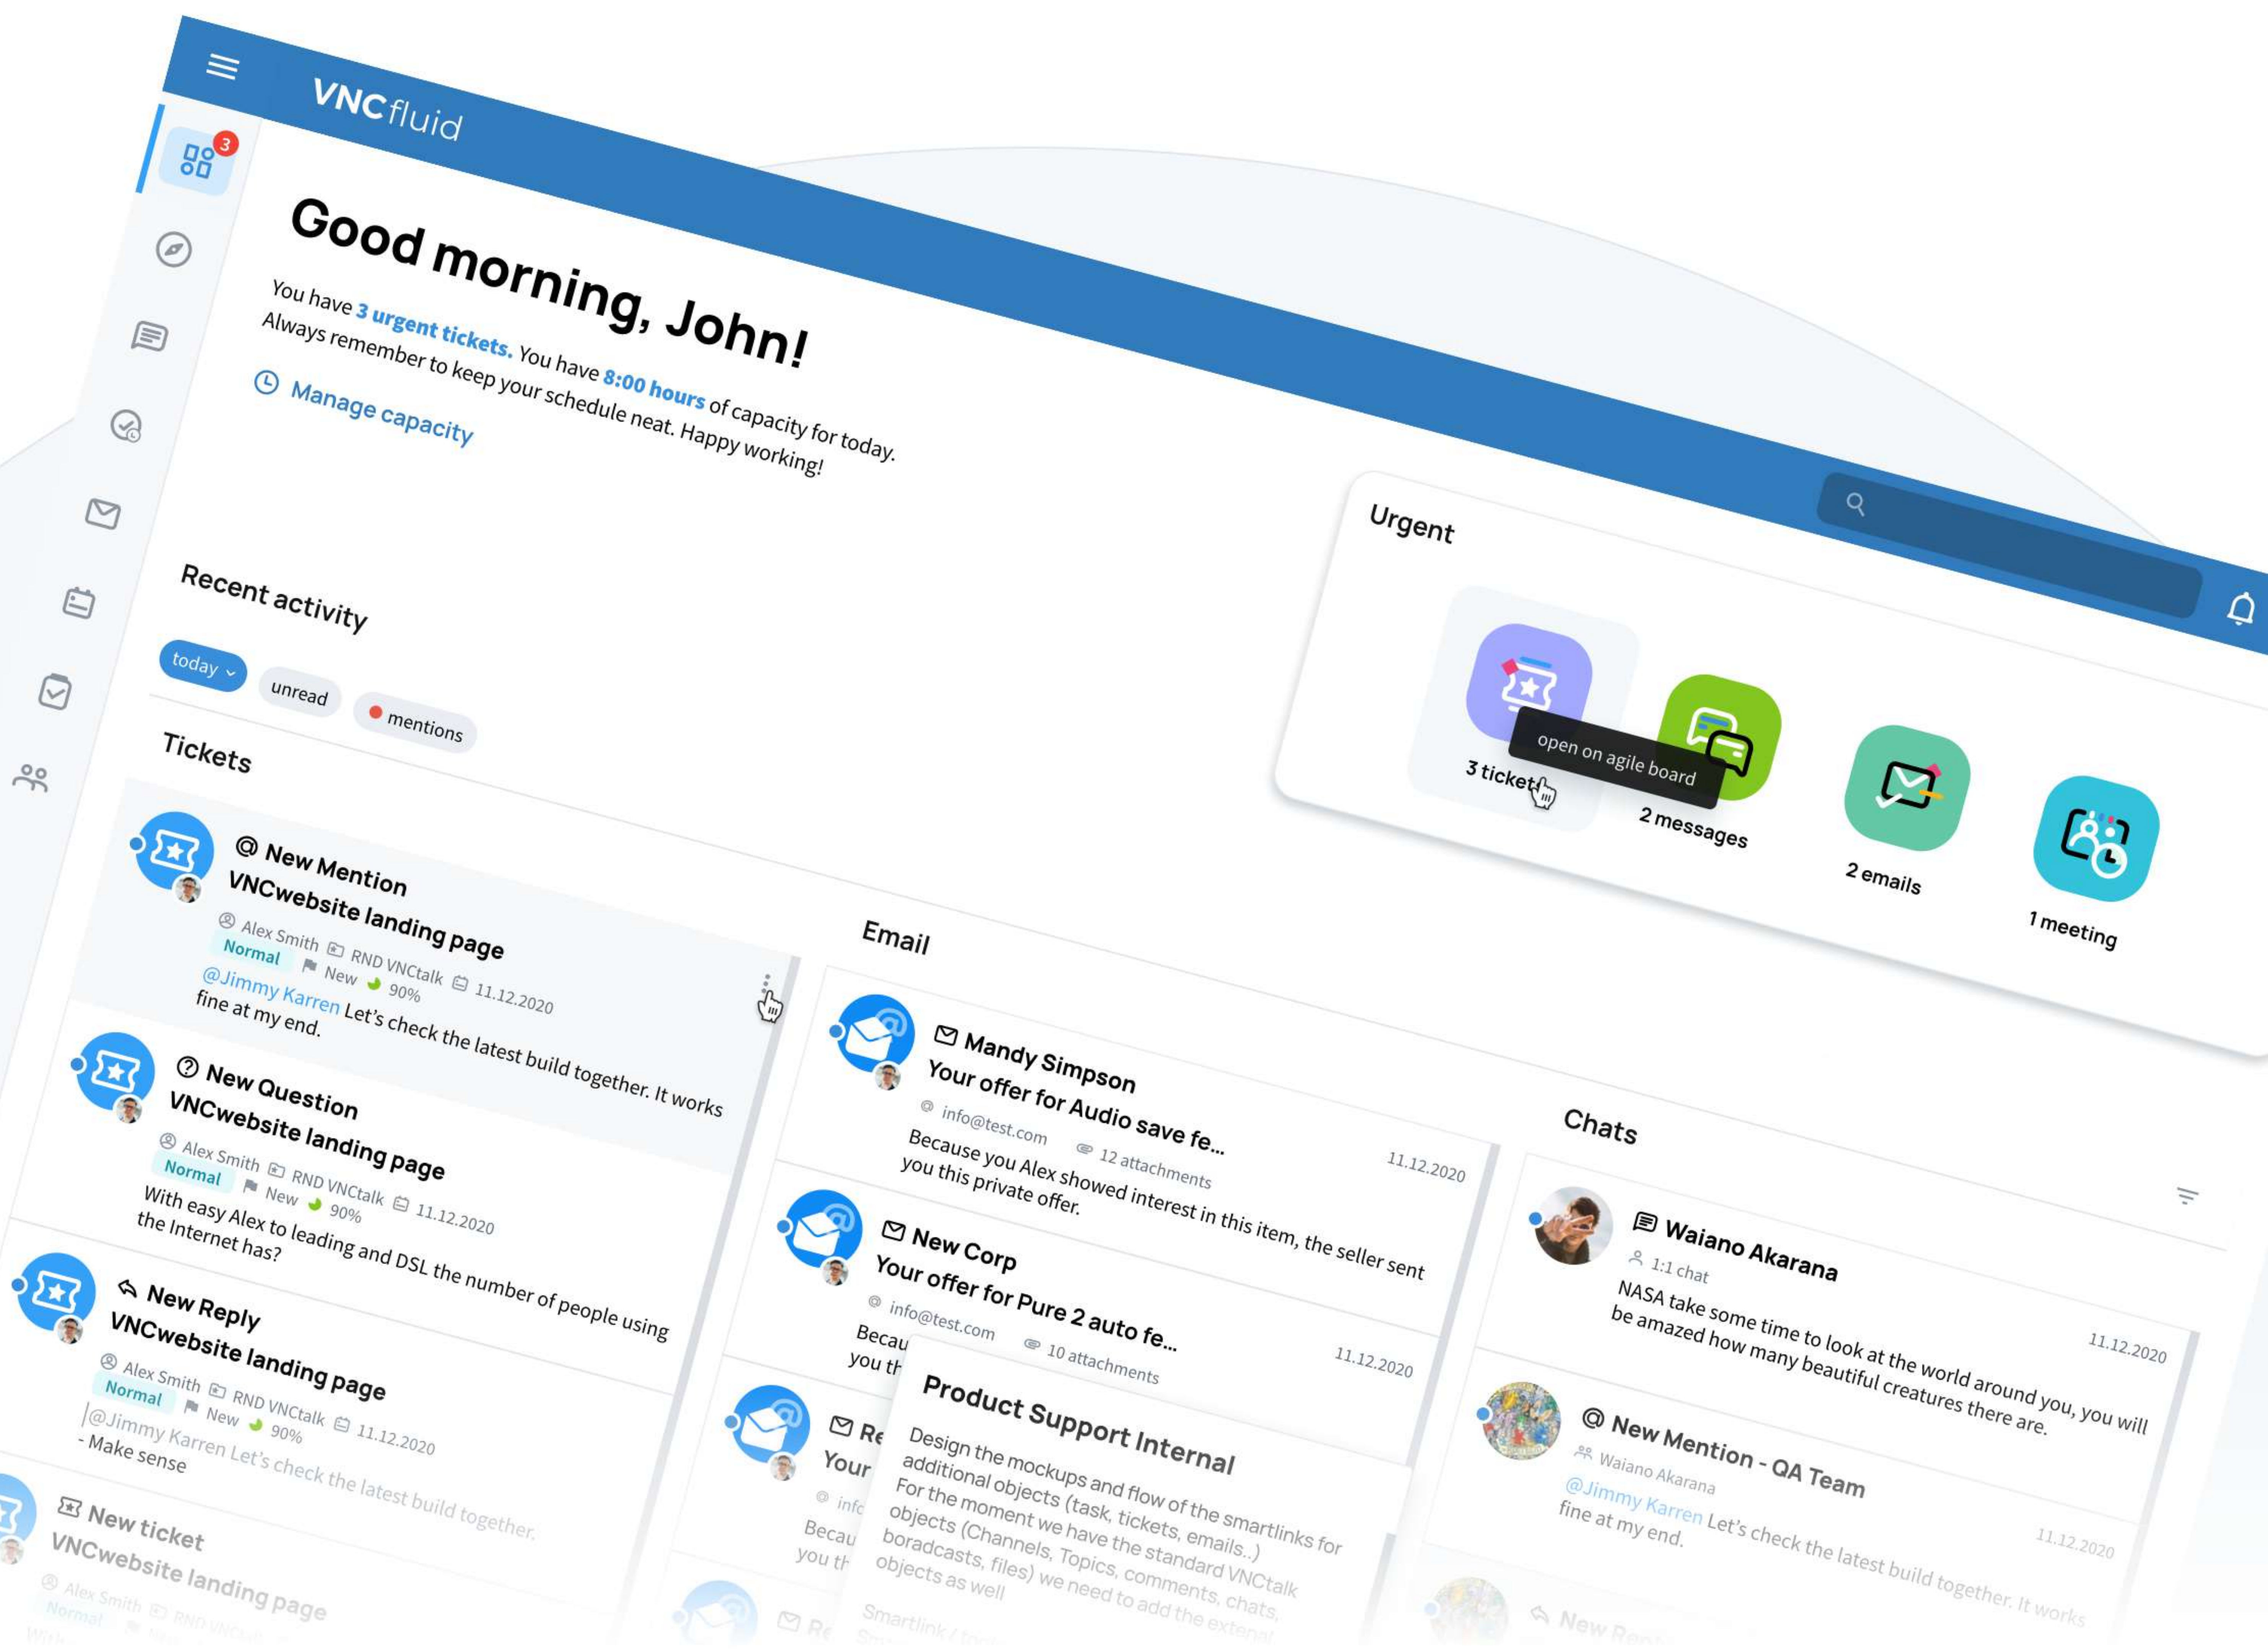

VNCfluid

Manage your day effortlessly

VNCfluid is your 360° Dashboard, where you can see, filter, sort, search for and get notified about any new events happening in your VNClagoon Suite. Such as: new chat messages, calls, emails, meetings, tickets, tasks, and more. Every morning, when you log in to VNClagoon, you'll see your most important urgent items at a glance.

From VNCfluid you can access each item (e.g. an email) with one click and you can for example reply to a chat message quickly and easily. At the same time, you can open up each module in itself from VNCfluid to give you the full experience and feature set of VNCtalk, VNCmail and any other VNClagoon application you are subscribed to.

VNCfluid Features

The VNCfluid Dashboard consists of different 'Dashlets' according to your individual subscriptions. You can activate or deactivate the display of these Dashlets in your settings to show only relevant VNC lagoon products.

First things First

See all urgent and most important alerts and notifications at the first glance in the top right corner: urgent tickets, messages, emails, meetings.

Notifications

Tailor your notifications in the notification center: you can choose between sound alerts with your favorite ringtone, badge colors, sticky notifications or email notifications after a certain period.

Switch to your Application

With one click you can switch from the VNCfluid dashboard to your VNC lagoon application to benefit from the whole set of functionalities. When you're done, you can switch back to VNCfluid just as easily.

VNC lagoon Integration

VNCfluid is your access point to all your subscribed VNC lagoon products. You need video conferencing and chat with whiteboard and screensharing? Use VNCtalk. You'd like to enhance your project management? With the integration of VNCproject you can create tickets from emails directly.

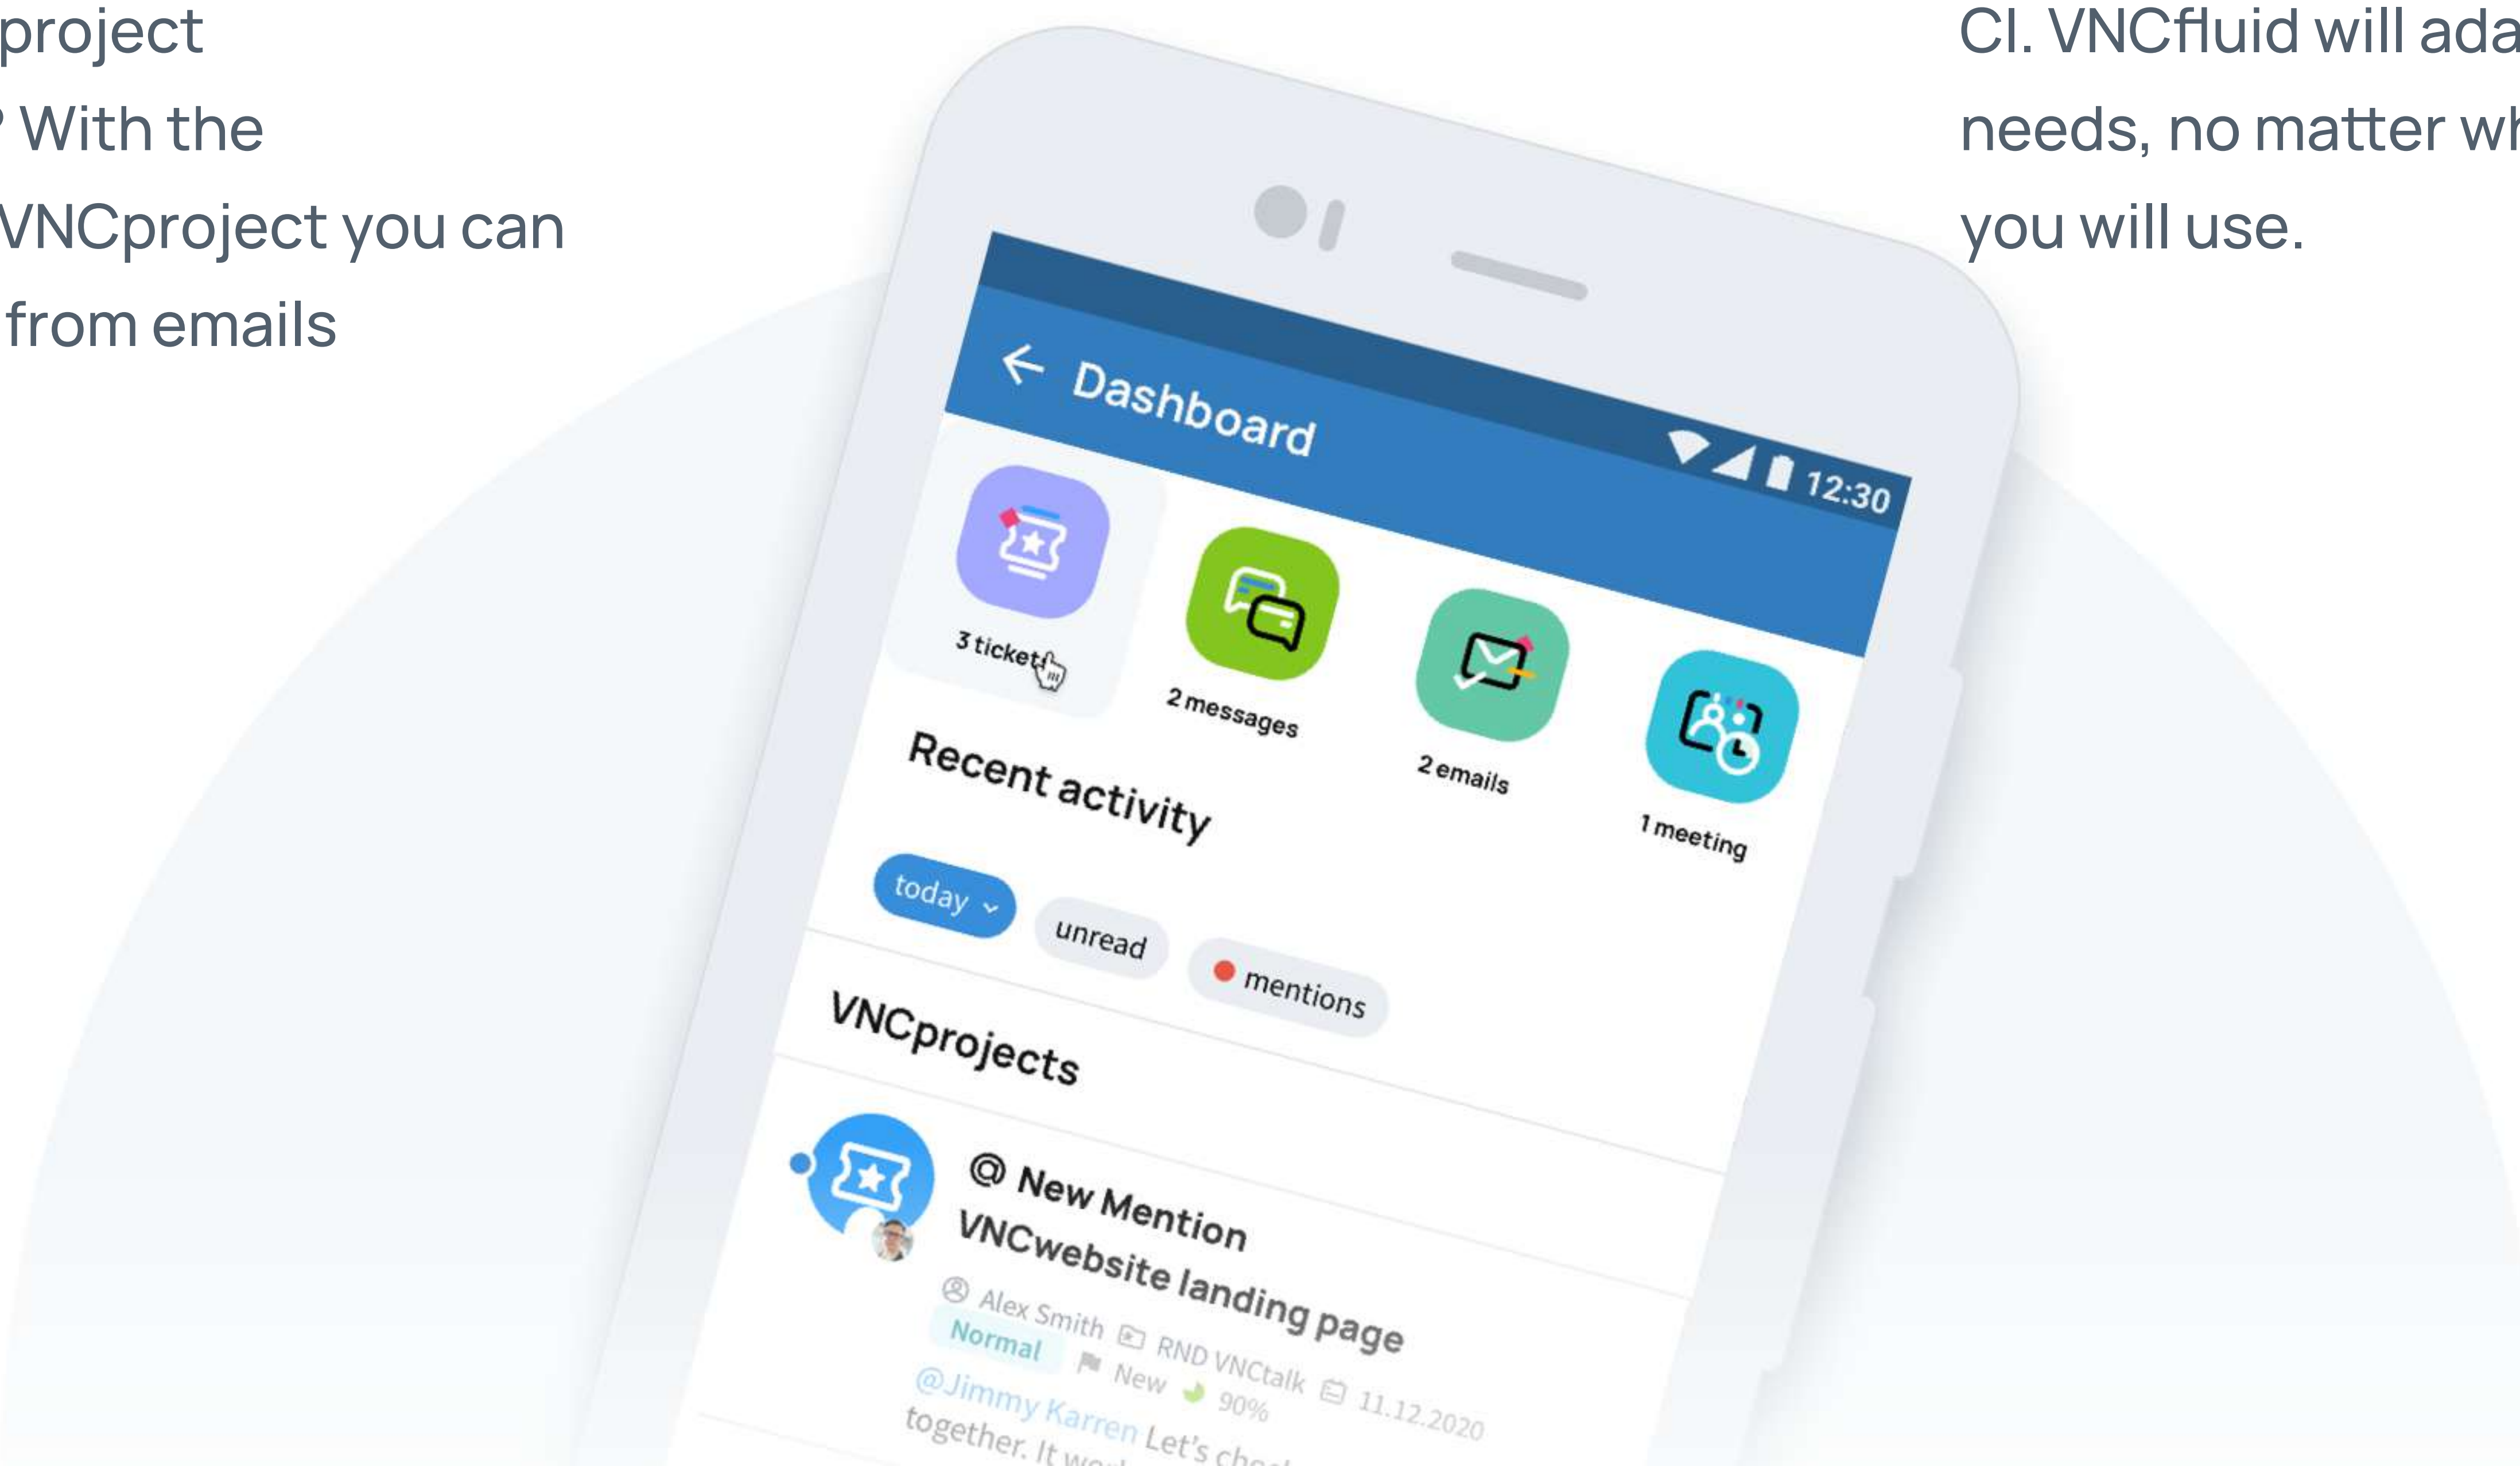

Settings & Customization

Select which VNC lagoon products you'd like to see on your 360° dashboard. Or change your preferred language.

Latest Frontend Technologies

Don't worry about layout issues on different devices. The VNCfluid UI works on mobile phones, desktop PCs, tablets and also allows individual layouts to adapt the design to your company CD/CI. VNCfluid will adapt to your needs, no matter which device you will use.

VNCfluid Highlights

VNCfluid, a dynamic dashboard, brings transparency to communication and collaboration channels, prioritizes tasks and automatically warns of critical deadlines. Thanks to the fluid principle, each employee can determine and design the work interface that best suits him or her.

All communication and collaboration channels converge in VNCfluid. VNCfluid searches, filters, sorts and organizes tickets, tasks, channels and e-mails, displays them clearly in the dashboard and automatically notifies users of critical timing via the notification center. At the same time, all function modules of VNClagoon are directly accessible. Applications such as VNCmail, VNCtask, VNCtalk, VNCcalendar or VNCproject can be started with a click from VNCfluid to send an email, update the task list or invite to a video conference. The Action Wheel for central control can also be used from VNCfluid.

360° Dashboard

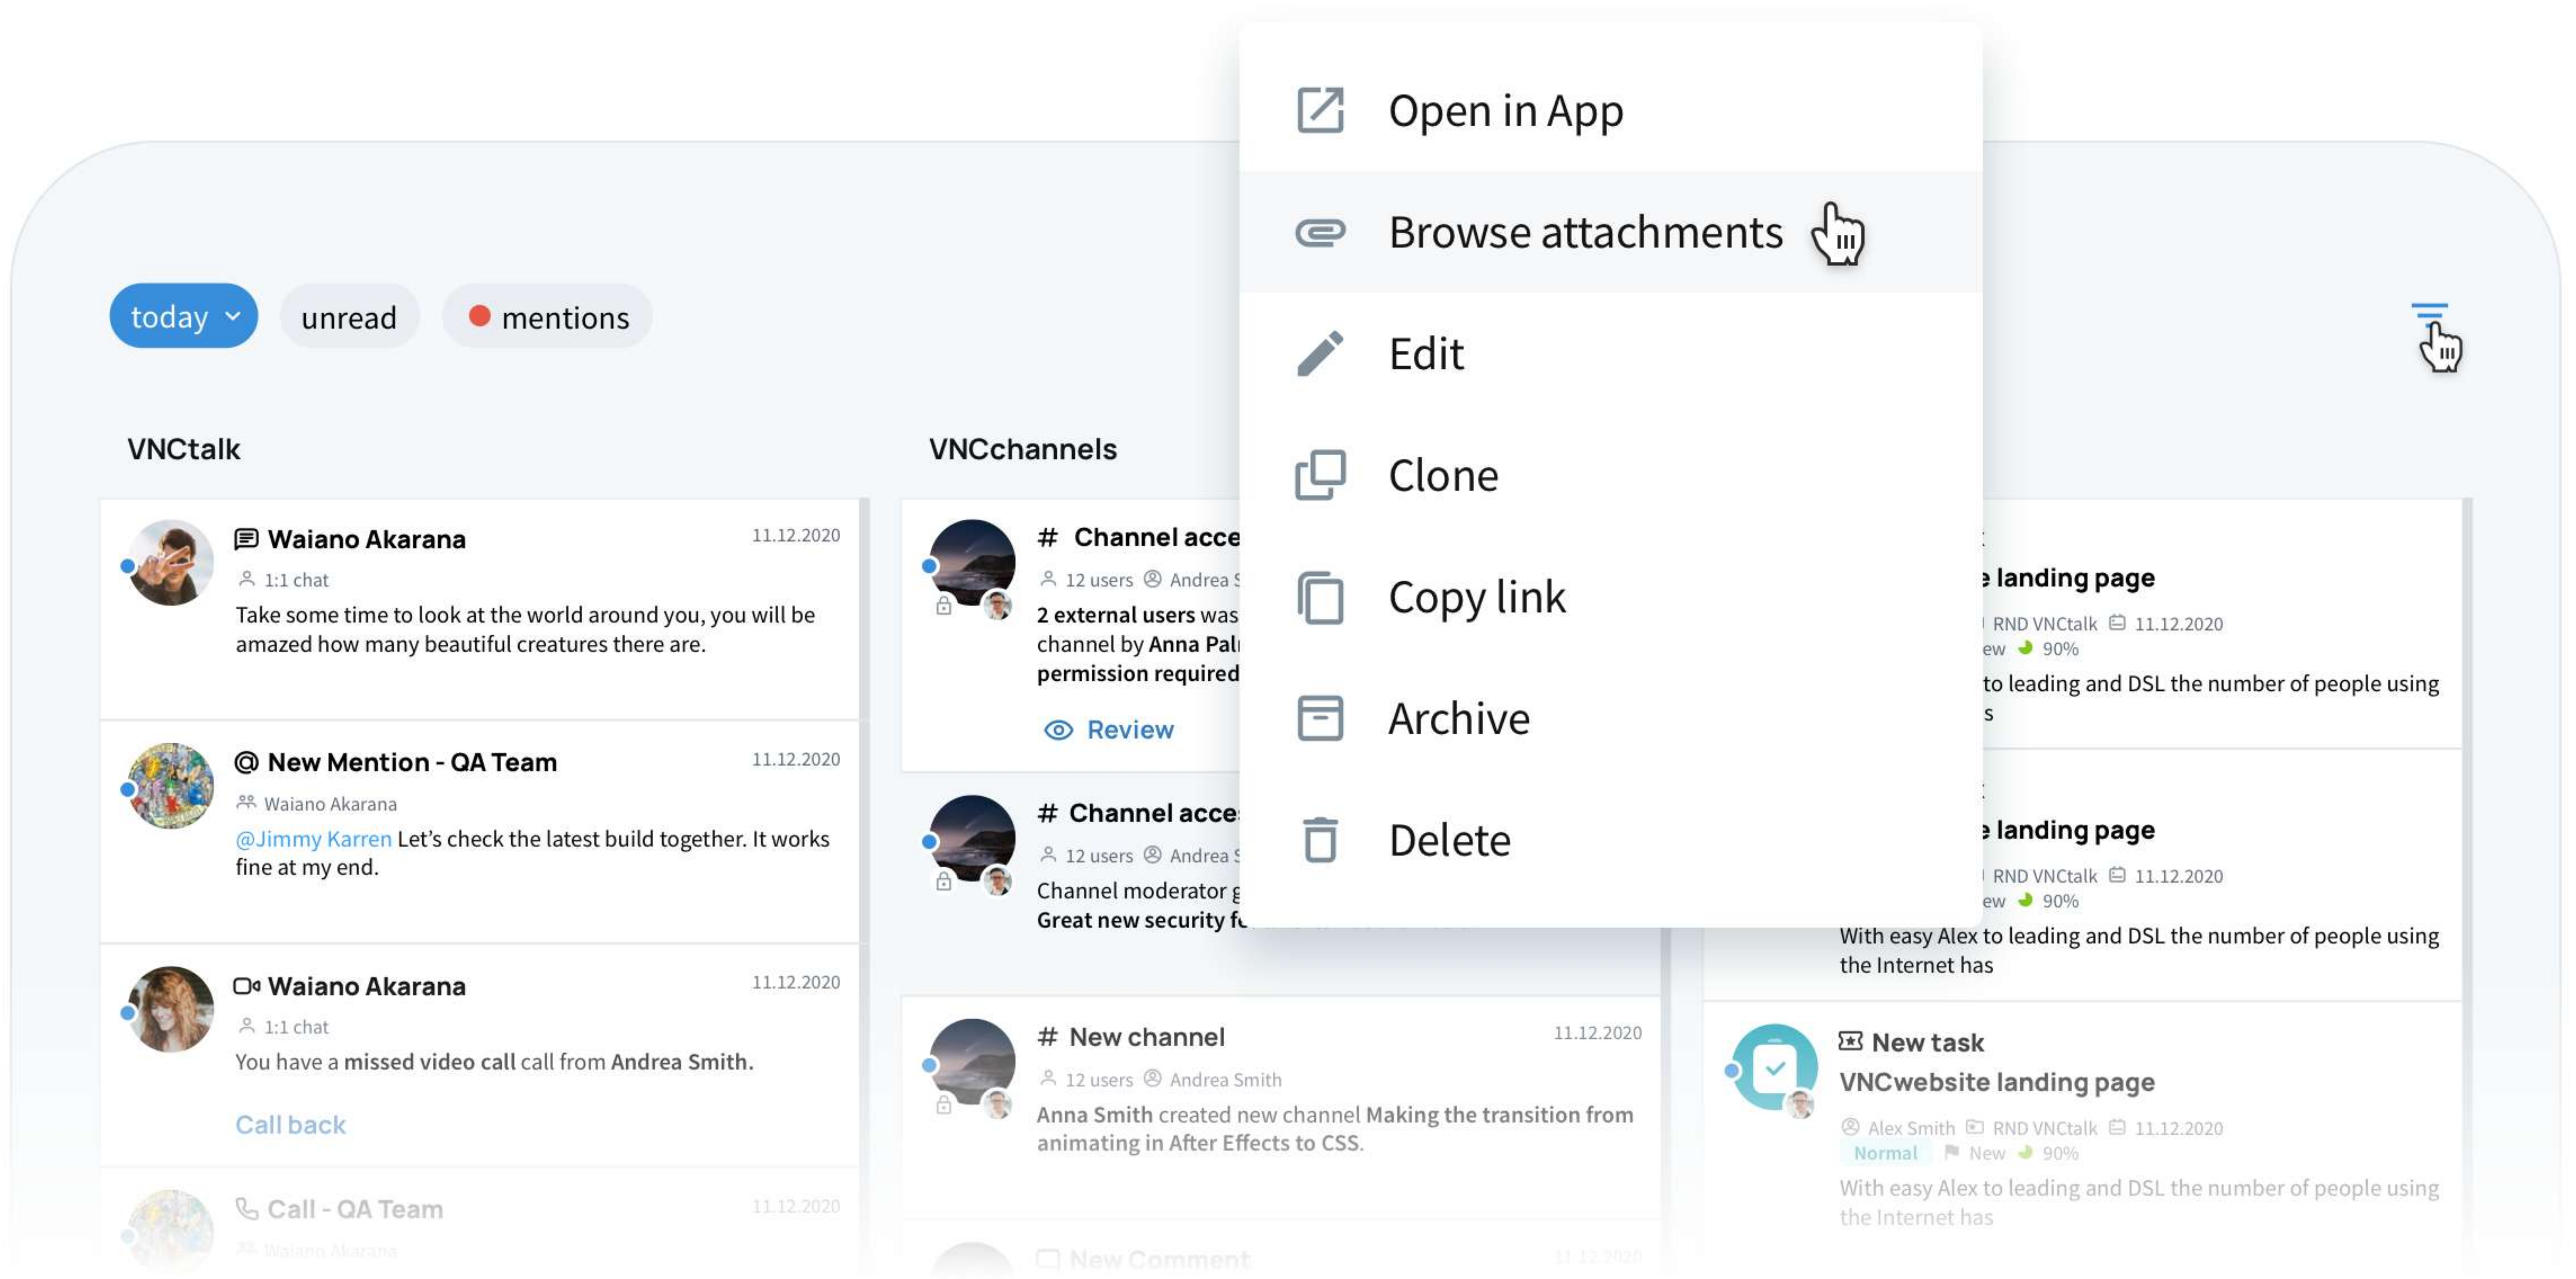

Complete overview of activities in all subscribed VNClagoon products. All recent chats, emails, tasks, tickets, events and more.

Customizable Views

Adaptable views and filters to view, edit, reply to, forward and watch items. Convenient notification center & overview of latest changes.

Start activities with one click

Start new activities such as chat messages, email replies, changes in tasks or log your time in VNCproject tickets easily. Switch to all subscribed VNClagoon products with one click.

“VNC challenges the software giants that are oppressing the market with their expensive, inflexible and uninventive proprietary solutions. It’s time for open-source applications to finally replace them. We use VNC’s collaboration tools ourselves, including VNCtalk and, most recently, VNCchannels. The tools have made the transition to working from home extremely easy. The comprehensive VNCIagoon product suite is a real highlight in terms of functionality and operation.”

Alain Blaes, Managing Director of PR-COM Beratungsgesellschaft für strategische Kommunikation mbH

“The federal state church intranet should strengthen communication and cooperation within the state church. The basic aim is to provide all full-time employees and volunteers of the regional church with access to an innovative, modern and unified communication and collaboration infrastructure. The VNCIagoon products are particularly well suited for this, because they allow us as a state church – in addition to the many functionalities provided – the possibility of customization options to individual needs within our church. “

Tabea Langguth, Project Manager Landeskirchenweites Intranet, EKBO

“VNC and DFB GmbH have been working together intensively for many years. We want to continue and expand this. The DFBnet mailbox developed and implemented by VNC has enormously accelerated and simplified our internal communication. With this, we see ourselves well prepared for future requirements.”

Steffen Iredi, authorized signatory at DFB GmbH and responsible Director Technology & Operations

“My team and I are very thankful for being able to count on the professional and sophisticated VNC team. VNC has supported us with a series of important projects, always exceeding our high expectations.”

Marius Hjelset, Project Head Hosted Services, Vodafone Group
